## Speaker:

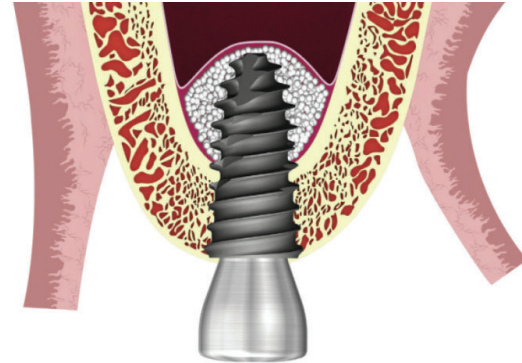

### Dr. Ali Abdellatif

BDS (Alex), IQE (UK),  
MFDS RCPS (Glasg),  
MSc Implant Dent (King's)

#### Specialist areas of expertise in Dental Implants and Cosmetic Dentistry

Ali has been practising dental implantology since 2005 and completed a Master's degree in Implant Dentistry at King's College London in 2007. Prior to this he practised as a senior house officer in different NHS oral surgery departments and was a lecturer in oral surgery at King's Dental Institute.

He has lectured at various meetings and MSc courses and has written articles on implant dentistry. He also mentors colleagues wishing to practise implantology.

I have used many implant systems over the years and started using Osstem Implant in 2011. I have found Osstem to be a reliable system with excellent bone and soft tissue maintenance.

The flexibility of prosthetic options, from the most basic pickups and abutments to digital solutions, has allowed me and my lab to progress with every development in implant dentistry and to provide my patients with the best options at each step.
